## ALARIS CONCEPTS

### Kaddy Bracket™ ATV Design Modification

It has come to my attention that the mounting of Kaddy Bracket ATV (quad bracket) is meeting with some difficulty on a select group of tubular quad racks. It seems that the ideal J-Bolt hole location in a minority of cases is somewhere between the holes that currently exist in the aluminum plate. To rectify this, I have modified the design slightly as shown in the photo below. If you are experiencing difficulty in getting a secure fit in the chosen location on your quad rack, I would suggest the following modification:

*Using a high-speed drill, add extra  $21/64$ " holes as required in these locations (staggered between existing holes, halfway between centerline and edge of plate).*

Please accept my apologies for any inconvenience this may cause. My goal is 100% customer satisfaction. If you are not completely satisfied with Bowkaddy and accessories, don't hesitate to contact me at the address, phone or email above.

Regards,

Arliss McNalley
